

Foreword

In this issue, the editors of the *Philippine Statistician* and the officers of the Association present the papers read at the Eleventh Annual Conference of the Association. Although the Conference had no theme it will be noted that the applied aspects of statistics were emphasized in all but one of the papers. This issue includes four of the six papers read at the Conference and the talk given by Mr. Sixto K. Roxas, then Director-General, Program Implementation Agency, and now Chairman, National Economic Council. The two remaining papers, *Normalization of the F'' Probability Function* by Domingo C. Alonzo and *Considerations for a Philippine Population Policy* by Basilio B. Aromin are scheduled for publication in the next issue.
